

Open positions in the Living Matter Theory group

Postdoctoral fellows, PhD students, IBS research fellow

The *Living Matter Theory* group at the *Center for Soft and Living Matter* of the Institute for Basic Science (IBS) is seeking motivated individuals in the areas of physical biology, systems biology, quantitative biology, non-equilibrium soft matter and related subjects. We are looking for theoreticians in these fields or those who wish to learn a new subject and conduct creative and independent research.

We aim to recruit excellent scientists and give them intellectual freedom. Our center offers world-class experimental and computational facilities, and competitive benefits. We are affiliated with *UNIST* (Ulsan National Institute of Science and Technology). Founded in 2007, this national research institute presently has about 300 faculty and is growing rapidly. It has a thriving international student body, with graduate and undergraduate classes taught in English.

We are hiring at several levels: *Graduate students*, *postdoctoral scholars* and *IBS fellows*. The fellowships offer an opportunity to join a community of scientists focused on the study of frontier problems in living matter. Candidates should send an application consisting of a CV, and a brief statement of research experience and interests. We may ask later for letters of recommendation. Please write to Dr. Tsvi Tlusty at lifeIBS@gmail.com. For further details, see life.ibs.re.kr.
